Letter of support

This message is addressed to you, in your capacity as Director of SPARSO, Bangladesh. It concerns **Md Hasanuzzaman Chowdhury Joy**. In my capacity of being the undergrad course teacher and the advisor of laboratory courses for Mr. Joy, it is my pleasure to write a few words about him in support of his application as a junior research fellow at your institute.

Currently, I am teaching him both theory (Microwave engineering) and laboratory work for the same course. For me, it's too early to assess his competence on the theoretical course but in the practical course he has already proven his perseverance, brilliance and capabilities.

Moreover, he is also involved in developing IoT based projects under my supervision. He has proven good knowledge in programming necessary for the embedded system and is very keen to learn new things. In fact, he has made significant progress in realizing the project, I would say.

Overall, he is one of the most competent students of his class. As a person, he is very honest, hardworking, and punctual. I notice that he has a curious mind which is important for doing science and engineering. Therefore, without any reservation I recommend Mr. Joy as a prospective research fellow at your institute.

Please feel free to connect with me if necessary.

Md Rasedujjaman
Assistant Professor
Department of Electrical and Electronic Engineering
Shahjalal University of Science and Technology, Sylhet-3114, Bangladesh.
